What is the E-pack?

E-pack consists of two components: portable charger case for stand by power and low power atomizer.

E-pack adopts the design of ergonomic circular arc. E-pack as a package of standby power for carrying, at the same time you can put battery and cartridge in it. It is not only convenient for users to carry but also supplies charge power at anytime and anywhere. In addition, it solves the problem of power shortage.

"Mini E-cigarette" adopts the microelectronic control technology and supercritical physical atomizing technology, uses the liquid compounding multiple edible and medicinal raw materials to aromatic liquid with various flavors. This high technology product could satisfy the people who plan to quit smoking, wonder smoking in the no smoking public places, and wonder to enjoy new vogue life.

Advantages of Mini E-cigarette

1、The liquid has been tested by “China Yunnan Provincial Center for Disease Control and Prevention”, which certifies this product is harmless and without poison. We have gained SGS Certificate. Can subassembly rest assured to use it.

2、Keep the user clean and fresh without any smell. Don’t worry about darkly stained teeth，like the person who use by inhales with normal cigarette.

After Normal Smoking

3、No tar, wouldn’t smoke lung as smoking normal cigarette.

After Normal Smoking

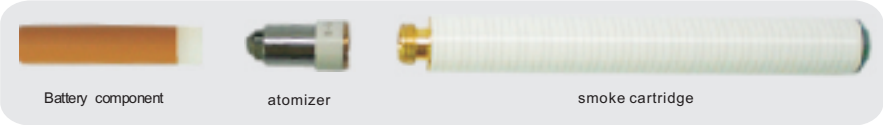
4、No fire origin, no electronic interference, can use in the gas station and can be applicable in flammable explosive environment.

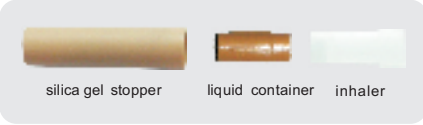
5、No environmental pollution, no second-hand smoke, so there is harmless to others' health. It can be used in no smoking public places, such as supermarket, bar, restaurant, subway, bus and other no-smoking places.

6、The taste of cigarette would be depending on your requirements.

Cigar taste　Tobacco taste　Brand cigarette　Coffe taste　Mint taste　Apple taste

Components of E-cigarette





A、Battery components: composed by air dynamic sensor, intelligent control circuit, intelligent chip, rechargeable lithium ion battery which are microelectronic high-tech components. When user inhales, it can supply power source for atomizer working to vaporize the liquid.

B、Atomizer: composed by low power vapor equipment and liquid container. The battery component offers power to fever the atomizer and vaporize the liquid to mist when user inhales.

C、Cartridge: composed by liquid, suction cotton, liquid container, inhaler, silica gel stopper. Take down silica gel stopper, the liquid container offer the liquid for the atomizer when use it.

Direction of use

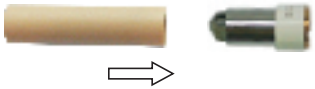
1、Screw the battery to atomizer

atomizer

smoke cartridge

2、Take down the silica gel stopper from cartridge

3、Insert the cartridge without silica gel stopper into the atomizer



4、Inhale just like smoking normal cigarette

Notices for use of Mini electronic cigarette

1、So as to avoid any unnecessary trouble and damage to the product. Please use our special set of subassembly（such as cartridge, USB charger, E-pack, power adapter）and operate in proper method

2、Replace the cartridge with a new one when have few mist.

3、The E-cigarette’s use time and frequency would be in step with the normal cigarette. Don’t exceed

4、Please replace a full battery when the indicator light which in the end of the product flash 30 times（about 9 seconds）.

5、Must use the special charger or E-pack to connect the power adapter.

6、Should place E-cigarette horizontally or keep LED down, do not keep LED upwards, in case of inhaling the liquid into mouth.

Cautions for use of E-cigarette

1、Store and use the Mini electronic cigarette in the dry environment, temperature from -4℃ to 40℃.

2、Don't use or store it in the high temperature environment, high pressure and damp places.

3、Keep it and components out of children's reach, in case of any accident.

4、The time of using electronic cigarette and frequency should be conform to the normal smoking cigarette, don't use overdo.

5、E-cigarettes is the precision electronic product, please avoid it from objects collision and falling from high place in case of damaging the product.

6、Don't mix with other mental objects in case of short-circuit, damages to the product and human.

7、Charge battery in the dry environment, it is prohibited to use charger in wet environment.

8、Avoiding damaging the battery and other components. Must use the special charger.

9、Please take this product to the special repairman if any problems occur in the product. Do not open the device by yourself, which will bring damages to the product and endanger yourself.

Suitable user and forbidden user

1、Suitable user

A、People who have been smoking for a long period of time, and suffering the consciousness of harms from smoking.
B、People working in no-smoking places but with the habit of smoking
C、Smokers who plan to quit smoking

2、Forbidden user

A、Minors who under 18 years old
B、People who sensitive to nicotine or any other ingredients.
C、Pregnant and breast feeding women
D、People with other unknown adverse reaction after using this product.

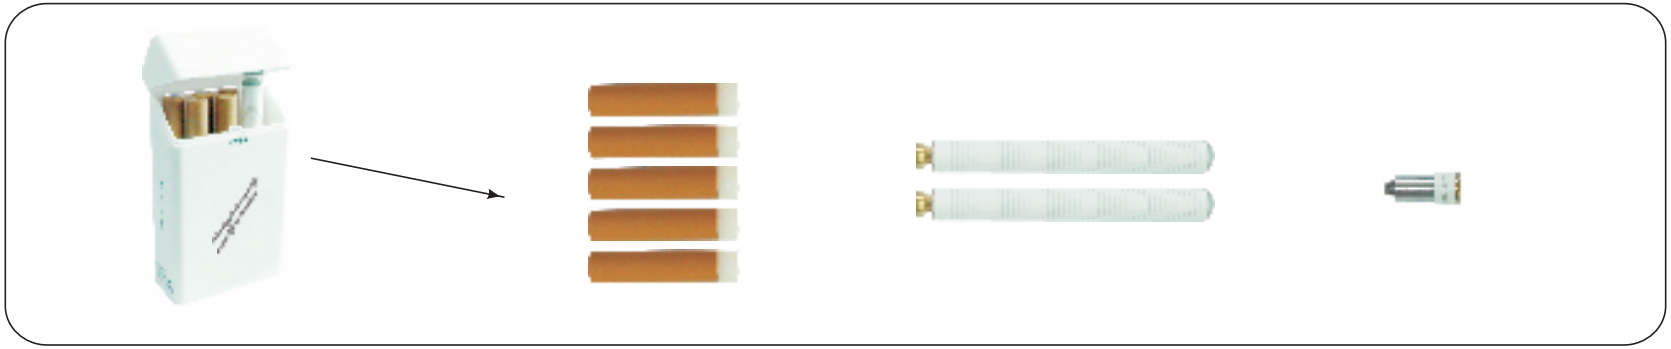
Operation of USB charger

Screw in the battery to the USB charger and connect the USB charger with the power adapter. Then connect the power adapter with the AC power (110V-240V). LED is continuously flashing 10 times which means battery component has totally turned circuit and start to charging. When the LED in the charger is red, it means charging; when it turns to green, the battery is full charged.

Notice: In order to fully active the capacity of battery, it must be kept for 8 hours at the first charging time.

Operation of E-pack

E-pack can cased: 5pcs cartridges, 2pcs batteries, 1pcs atomizer



Screw the battery into E-pack tightly, LED near the “output” turns to red, indicating the battery is in charging. When it turns to green, the battery is full charged.

The DC jack in the bottom of E-pack connect USB liner then connect the Power adapter with the AC power (110V -240V). LED near the “Input” turns to red, it means the battery is in charging. When it turns to green, the battery is full charged

RED LIGHT SHOWS THAT IN CHARGE

GREEN LIGHT SHOWS FULL OF CHAGRE

Abnormal phenomenon in use and treatment

Smog decrease

1 Replace a new cartridge
2 Replace a full Charged battery
3 Replace a new atomizer

The LED turns normal light but no smoke, as you inhale

1. Whether the battery does screw tightly with the atomizer;
2. Whether the Cartridge have enough liquid, or need to replace a new cartridge.
3. Whether the atomizer fever when sucking. If not, it is possible broke, please replace a new atomizer.

The LED shines 30 times without smog

The voltage of battery is insufficient. Please change a full charged battery

The LED shines 15times without smog

Completely sucking 15 puffs within one minute, the circuit alarming reminds you not to use overdo and it will recover after waiting 30 seconds

The LED Does not shine

The battery probably broken. Please change a new battery.
